Welcome to the new acrolinx newsletter

This edition features:

- the release of acrocheck™ 3.0
- first acrocheck User Days in Berlin
- successful start into the year 2006.

acrocheck™ 3.0. – the innovation powerhouse

Released in May, acrocheck™ 3.0 is packed with exciting innovations. Terminology can now be harvested, imported, validated, and checked more efficiently than ever. Thanks to our new TermDesign™ module, the time-consuming manual task of managing single terms can be minimized, or even eliminated. Also new is a powerful intelligent content reuse feature. The 3.0 release of acrocheck™ makes language checking even more powerful: cost reductions of up to 20 percent can be realized in localization alone.

First acrocheck™ User Days

On May 18 and 19 the first acrocheck™ User Days took place in Berlin. Twenty representatives from nine global corporations gathered at the offices of SAP, the host of the event. On the first day of the event, acrolinx presented their technology and product roadmap for acrocheck, followed by a detailed demonstration of acrocheck™ 3.0. A variety of use cases highlighted the different ways of deploying acrocheck™. The second day of the event focused on communication among the acrocheck™ users themselves.

Sucessful start into 2006

2006 has started very successfully for acrolinx. Given the high level of interest in acrocheck™ at trade shows and events thus far, we anticipate a record number of new customers and partners. And the number of acrocheck™ users passed the 1,000 mark this spring. "Our success story continues," states acrolinx CEO Andrew Bredenkamp. "If we continue on like this, we will have a customer base of more than 40 large corporations by the end of the year. This will strengthen our market-leading position even further."
